

# Is Your Email Archiving Policy Out of Date?

Are you looking for an affordable email archiving solution?

Would you like a solution that requires no hardware or software?

What if it could be setup before the end of the day?

*According to the new federal rulings passed by the Supreme Court on December 1, 2006, school districts, government agencies and businesses are required to archive all electronically stored information, including email, which could be considered evidence in the event of a lawsuit. All electronically stored information will be subject to legal discovery and failure to produce these records may put your organization at risk for court sanctions.*

**Gaggle.Net**

# Gaggle's Hosted Archive Solution

With the Gaggle Email Archive Solution, all messages are saved on our redundant storage systems. Gaggle maintains two enterprise class storage systems; one in California and one in Illinois. These storage systems are designed to work even with multiple drive failures and provide snapshot capability so files cannot be inadvertently or intentionally deleted.

## *Pricing:*

The cost is based upon an annual price per user for unlimited storage. Gaggle's solution generally costs less than other hosted solutions and the total cost of ownership is substantially less than buying and maintaining storage equipment in your data center.

## *Hosted Archiving for Exchange, GroupWise & other systems*

The Gaggle archiving solution pulls the email data off of your local mail server on a nightly or even hourly basis. The messages are pulled from your mail server and stored on Gaggle's enterprise storage systems in both Los Angeles and Chicago.

Each mail server uses a slightly different archiving mechanism. The most common methods utilize a message journaling feature or a store-before-delete function. Other mail systems require a pass-thru MX or may rely upon mail routing rules.

Supported mail systems include: MS Exchange, GroupWise, Google Apps, Lotus Notes, FirstClass, NetMail, PostFix, SendMail, qMail, @mail, AppleMail server, and iMail.

## *Message Searching:*

All mail archived onto the Gaggle system is indexed for fast searching. You can search an individual user account or search for messages across your entire organization. You can search message bodies, subjects, from address, to address and more. Searches are very fast and typically return results in less than 5 seconds.

In addition to indexing of the messages, Gaggle provides search capability for common attachment types such as MS Word, PowerPoint, Excel, PDF, RTF and TXT documents.

The system supports Boolean search terms with multiple wild cards just like the Google search engine. Sophisticated search options such as proximity searches, fuzzy searches, wild cards and boosted search terms are also available.

Because the search functionality is built into Gaggle's new AJAX interface, it is fast and easy to use. Gaggle's web based interface looks just like an email client such as Outlook. Since there is no complicated system to learn, you'll immediately know how to search for and find the archived messages you need.

## *Valuable Features Include:*

- Multiple Access Levels
- Private Account Option
- Real Customer Service - No Voice Jail
- Logging of Searches and Message Access
- Meta Data Download
- Message Re-delivery
- Back Up Email System
- LDAP Authentication
- Nightly Archive Reports
- Message Integrity Verification...and Many More.
